

SVKM'S NMIMS

MUKESH PATEL SCHOOL OF TECHNOLOGY MANAGEMENT & ENGINEERING

Academic Year: 2022-2023

Program/s: B.Tech

Year: II Semester: IV

Stream/s: Artificial Intelligence

Subject: Machine Learning

Time: 03 hrs (10:00 am to 1:00 pm)

Date: 28 / 06 / 2023

No. of Pages: 6

Marks: 100

Re-Examination (2021-22 / 2022-23)

Instructions: Candidates should read carefully the instructions printed on the question paper and on the cover of the Answer Book, which is provided for their use.

- 1) Question No. 1 is compulsory.
- 2) Out of remaining questions, attempt any 4 questions.
- 3) In all 5 questions to be attempted.
- 4) All questions carry equal marks.
- 5) Answer to each new question to be started on a fresh page.
- 6) Figures in brackets on the right hand side indicate full marks.
- 7) Assume Suitable data if necessary.

Q1		Answer briefly: (Each question carries 4 marks)	[20]
CO-1; SO-2; BL-2	a.	Explain the data science life cycle with the help of schematics. Mention the most important challenges in building a machine learning model.	
CO-1; SO-2; BL-3	b.	For the following vectors, x and y, calculate the indicated similarity or distance measures. $x = (1, 1, 1, 1)$, $y = (2, 2, 2, 2)$ cosine, correlation, Euclidean $x = (0, 1, 0, 1)$, $y = (1, 0, 1, 0)$ cosine, correlation, Euclidean, Jaccard $x = (0, -1, 0, 1)$, $y = (1, 0, -1, 0)$ cosine, correlation, Euclidean $x = (1, 1, 0, 1, 0, 1)$, $y = (1, 1, 1, 0, 0, 1)$ cosine, correlation, Jaccard $x = (2, -1, 0, 2, 0, -3)$, $y = (-1, 1, -1, 0, 0, -1)$ cosine, correlation	
CO-1; SO-2; BL-4	c.	Describe how a box plot can give information about whether the value of an attribute is symmetrically distributed. What can you say about the symmetry of the distributions of the attributes shown in Figure?	

CO-2; SO-2; BL-2	d.	For Linear regression, please derive an equation for all thetas in form of matrix representation for each iteration using gradient descent.																																																																														
CO-3; SO-2; BL-2	e.	What is the use of a validation set in classification models in machine learning? How can you solve issues of missing data in a data set for all kind of data types.																																																																														
Q2 CO-3; SO-3; BL-3		a. Predict the class label for a test sample ($A = 0, B = 1, C = 0$) using the naive Bayes approach. b. Predict the class label for a test sample ($A = 0, B = 1, C = 0$) using the naive Bayes approach but with Laplace estimate. c. Compare the output from (a) and (b), which method is better and why? <table><tr><th>Record</th><th>A</th><th>B</th><th>C</th><th>Class</th></tr><tr><td>1</td><td>0</td><td>0</td><td>0</td><td>+</td></tr><tr><td>2</td><td>0</td><td>0</td><td>1</td><td>-</td></tr><tr><td>3</td><td>0</td><td>1</td><td>1</td><td>-</td></tr><tr><td>4</td><td>0</td><td>1</td><td>1</td><td>-</td></tr><tr><td>5</td><td>0</td><td>0</td><td>1</td><td>+</td></tr><tr><td>6</td><td>1</td><td>0</td><td>1</td><td>+</td></tr><tr><td>7</td><td>1</td><td>0</td><td>1</td><td>-</td></tr><tr><td>8</td><td>1</td><td>0</td><td>1</td><td>-</td></tr><tr><td>9</td><td>1</td><td>1</td><td>1</td><td>+</td></tr><tr><td>10</td><td>1</td><td>0</td><td>1</td><td>+</td></tr></table> d. For the one-dimensional data shown below, Classify the data point $x = 4.6$ according to its 1-, 3-, 5-, and 9-nearest neighbors (using majority vote) <table><tr><td>X</td><td>0.5</td><td>3.0</td><td>4.5</td><td>4.6</td><td>4.9</td><td>5.2</td><td>5.3</td><td>5.5</td><td>7.0</td><td>9.5</td></tr><tr><td>Y</td><td>-</td><td>-</td><td>+</td><td>+</td><td>+</td><td>-</td><td>-</td><td>+</td><td>-</td><td>-</td></tr></table>	Record	A	B	C	Class	1	0	0	0	+	2	0	0	1	-	3	0	1	1	-	4	0	1	1	-	5	0	0	1	+	6	1	0	1	+	7	1	0	1	-	8	1	0	1	-	9	1	1	1	+	10	1	0	1	+	X	0.5	3.0	4.5	4.6	4.9	5.2	5.3	5.5	7.0	9.5	Y	-	-	+	+	+	-	-	+	-	-	[20]

Y	-	-	+	+	+	-	-	+	-	-																																																																						

Q3

CO-3; SO-3; BL-3

a. Using Apriori algorithm for the below data, Find

- The frequent itemsets.
- Association rules for frequent itemsets with the largest number of items.

Assume that minimum support ($s = 2$) and minimum confident threshold ($c = 60\%$)

[20]

TID	Items
T1	I1, I2, I5
T2	I2, I4
T3	I2, I3
T4	I1, I2, I4
T5	I1, I3
T6	I2, I3
T7	I1, I3
T8	I1, I2, I3, I5
T9	I1, I2, I3

b. You are asked to evaluate the performance of two classification models, M1 and M2. The test set you have chosen contains 26 binary attributes, labeled as A through Z. The below table shows the posterior probabilities obtained by applying the models to the test set. (Only the posterior probabilities for the positive class are shown). As this is a two-class problem,

$$P(-) = 1 - P(+)$$

$$P(-|A, \dots, Z) = 1 - P(+|A, \dots, Z)$$

Assume that we are mostly interested in detecting instances from the positive class:

- Plot the ROC curve for both M1 and M2. (You should plot them on the same graph.) Which model do you think is better? Explain your reasons.
- For model M1, suppose you choose the cutoff threshold to be $t = 0.5$. In other words, any test instances whose posterior probability is greater than t will be classified as a positive example. Compute the precision, recall, and F-measure for the model at this threshold value.
- Repeat the analysis using the same cutoff threshold on model M2. Compare the F-measure results for both models. Which model is better? Are the results consistent with what you expect from the ROC curve?

Instance	True Class	$P(+ A, \dots, Z, M1)$	$P(+ A, \dots, Z, M2)$
1	+	0.73	0.61
2	+	0.69	0.03
3	-	0.44	0.68
4	-	0.55	0.31
5	+	0.67	0.45
6	+	0.47	0.09
7	-	0.08	0.38
8	-	0.15	0.05
9	+	0.45	0.01
10	-	0.35	0.04

Q4 CO-2; SO-2; BL-3	a. What is Lasso and Ridge regression? Which of these are used for feature reduction (Explain with schematics?) b. What is Ensemble learning? What is the difference between Bagging and Boosting techniques? c. For the below Data set build a XGBoost regressor, use learning rate=0.5 and lambda=1, gamma=0. Build the M0 and M1 learners only. <table> <tr> <th>Years of experience</th><th>Gap</th><th>Annual Salary (in 100k)</th></tr> <tr><td>1</td><td>N</td><td>4</td></tr> <tr><td>1.5</td><td>Y</td><td>4</td></tr> <tr><td>2.5</td><td>Y</td><td>5.5</td></tr> <tr><td>3</td><td>N</td><td>7</td></tr> <tr><td>5</td><td>N</td><td>7.5</td></tr> <tr><td>6</td><td>N</td><td>9</td></tr> </table>	Years of experience	Gap	Annual Salary (in 100k)	1	N	4	1.5	Y	4	2.5	Y	5.5	3	N	7	5	N	7.5	6	N	9	[20]
